Searching for a stealth parental control or employee monitoring software for Mac? **Perfect Keylogger for Mac** is what you need. This is the only Mac keylogger offering so complete set of monitoring features! It invisibly records keystrokes typed, IM chats (both ways), websites visited and makes screenshots. It also fully supports email notifications and can send all activity recorded by FTP or iDisk. This program would be useful for anyone who needs a stealth computer monitoring solution for Mac. More details are available at www.blazingtools.com/mac_keylogger.html

Start Menu for Mac OS X (freeware by BlazingTools Software)

Start Menu is a free software for Mac OS X which provides a simplified Start Menu functionality from the Windows world. You'll be able to browse the list of all installed Applications and run what you need with a single mouse click - like you do in Windows. Click the program icon to show the menu. Download www.blazingtools.com/mac/StartMenu.zip

Right Zoom for Mac OS X 1.72 (freeware by BlazingTools Software)

Right Zoom utility is created for people who don't like a default behaviour of green Zoom button in Mac OS X programs. This small program changes its behaviour, so a green button will always maximize your windows instead of inconvenient resizing. The program changes a behaviour of most used applications like Finder, Safari, MS Word/Excel/PowerPoint, Pages, Numbers. Those applications are most annoying examples of inconvenient zoom button behaviour. You can extend the list with more applications. You can also use **Command + Option (=Alt) + E** keys to maximize/restore the current active window in most applications. You can set this Zoom button behaviour for all applications, just customise the options.

Right Zoom was not tested with every possible application, so don't expect it to be ideal. We recommend to use it only with applications you need to tweak, and make sure it doesn't cause any side effects there.

If you want to send a donation for this app, just buy any of our shareware tools (starting from \$10) at www.blazingtools.com

Installation: copy the program file into *Applications* folder and run it. You will need to enter your Administrator password (in Mac OS X 10.5 and later) to allow the program to interact with other applications. If you have Mac OS X 10.4, you will need to check «Enable access for assistive devices» checkbox in *System Preferences > Universal access* before using the program.

If you have multiple user accounts on your Mac, we recommend to place a copy of the app into the home folder of every user. That's because RightZoom stores its options inside application's bundle — that makes possible to uninstall it completely just by deleting the app.

The options window will appear on the first launch, click *Activate Right Zoom* checkbox there, then *Apply* and *Close* buttons. You can also adjust another options of your choice.

The program runs without a graphical interface and takes a minimum of system resources. If you would like to stop/close the program, double-click its icon, uncheck *Activate Right Zoom* checkbox and click *Apply*, then *Close* buttons.

Removal: just stop/close the application and delete its file.

To change the program options at any time, just launch **Right Zoom** app 

<- *Application's options*

Known limitations: if you click Zoom button inside inactive application, Right Zoom may not work. Activate the application first by clicking its window title.

If you have more than one monitor and something is not working for you, please let us know.

If you'll find any problems with another applications while RightZoom is running, please report that to us. Some Adobe apps

are known to be incompatible with Right Zoom.

You can add a problematic application to Exclusions and it should be OK, or use the program in «hold a key + zoom it» mode.

Visit our site - www.blazingtools.com for more useful software! 21 March 2011.

Special thanks

Special thanks to Vincent van den Heuvel, who created the program's icon. Thanks to [NeoOffice](#) developers for providing a nice and free text editor for Mac OS X, used to create this help file.
